ANALYST EARNINGS ESTIMATES

Earnings forecasts provide one measure of a stock's prospects for the future. Analysts regularly make their predictions on the future earnings of companies they follow and these forecasts are combined and published as consensus earnings estimates.

Where can the individual investor find

these estimates?

A few companies specialize in providing consensus estimates and they are listed in the first section below. Subscribing to their services can be costly, but their publications may be available at a library or through a brokerage firm.

Computer users have more options;

the second section lists the major services where earnings estimates can be obtained. Many stock databases include earnings estimates. Alternatively, you can order reports on an individual company through some of the services below.
