Choosing and Analyzing a Fund

AAII's Fund Database

Using Morningstar to supply our data

- More than 24,000 open-end mutual funds
 - Funds widely available to individual investors
 - Funds sold through advisers
 - Institutional class funds
 - Funds you may find in a 401(k) plan
 - Load and no-load funds
- 2,500 exchange-traded funds (ETFs)
 - All public exchange-traded funds, notes, etc.

AAII's Fund Database

- Updated monthly
- Includes total returns, expense ratios, portfolio allocations, risk ratios and more
- We are now using Morningstar categories
- Determine mutual fund grades to ease comparison across categories

Useful Lists on the Fund Pages Available to AAII Members

- Top/Bottom Performing Funds
- Consistent Performers
- Manager Changes
- Performance Benchmarks
- Equity Risk-Adjusted Returns

Best Approach:
Have your allocation needs determine which
asset class groups you look at

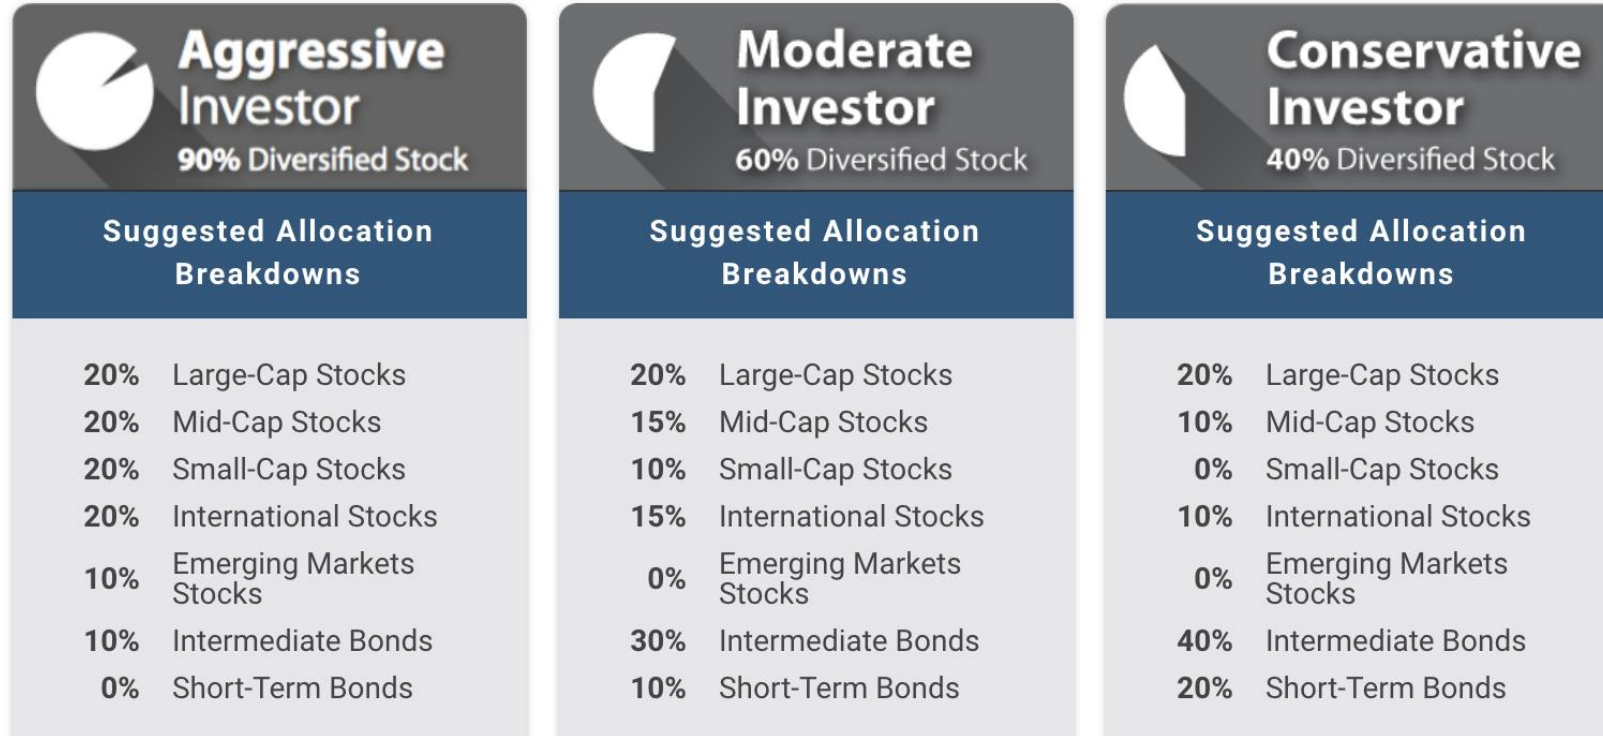

Individual Investor Wealth-Building Process

1. Define Goals and Cash Flow Needs
2. Pick an Appropriate Allocation
3. Identify Investing Preferences
4. Select Investments
5. Monitor

www.aaii.com/learnandplan

AAII Asset Allocation Models

www.aaii.com/asset-allocation

Mutual funds used as proxies for calculating the historical performance for the allocation models starting in December 2020 are:

Large-cap stocks: Vanguard 500 Index Admiral Shares ([VFIAX](#))

Mid-cap stocks: Vanguard Admiral Mid-Cap Index Fund Admiral Shares ([VIMAX](#))

Small-cap stocks: Vanguard Small Cap Index Admiral Shares ([VSMAX](#))

International stocks: Vanguard Developed Markets Index Fund Admiral Shares ([VTMGX](#))

Emerging market stocks: Vanguard Emerging Markets Stock Index Admiral Shares ([VEMAX](#))

Intermediate-term bonds: Vanguard Intermediate-Term Treasury Investor Class ([VSIGX](#))

Short-term bonds: Vanguard Short-Term Treasury Admiral Shares ([VFISX](#))

More fund options for implementing the allocation models in a portfolio can be found in our [Funds](#) page.

Exchange-traded funds (ETFs) that can serve as proxies for the above allocation models include, but are not limited to:

Large-cap stocks: Vanguard 500 Index Admiral Shares ([VOO](#))

Mid-cap stocks: Vanguard Admiral Mid-Cap Index ETF ([VO](#))

Small-cap stocks: Vanguard Small Cap Index ETF ([VB](#))

International stocks: Vanguard Developed Markets Index ETF ([VEA](#))

Emerging market stocks: Vanguard Emerging Markets Stock ETF ([VWO](#))

Intermediate-term bonds: Vanguard Intermediate-Term Treasury ETF ([VGIT](#))

Short-term bonds: Vanguard Short-Term Treasury ETF ([VGSH](#))

ABOUT IWY

iShares Russell Top 200 Growth ETF (IWY), launched in 2009, has been managed by Greg Savage since September 22, 2009, at iShares. The fund's primary benchmark is the Russell Top 200 Growth TR USD index, with a weighting of 100%. The investment seeks to track the investment results of the Russell Top 200 Growth Index, which measures the performance of the largest capitalization growth sector of the U.S. equity market. The fund generally will invest at least 90% of its assets in the component securities of the underlying index and may invest up to 10% of its assets in certain futures, options and swap contracts, cash and cash equivalents, as well as in securities not included in the underlying index, but which the advisor believes will help the fund track the underlying index.

Its expense ratio is below average compared to funds in the Large Growth category. IWY has an expense ratio of 0.20%, which is 60% lower than its category. The fund has returned 61.0% over the past year and 23.6% annually over the past three years, 21.6% per year over the past five years, and 17.3% per year over the past decade. Recently, in the month of March 2021, IWY returned 2.5%.

IWY has an R-squared of 91%, a beta of 1.00, and a standard deviation of 19.2%.

Look at the Prospectus

How can I tell which Retirement Fund is most appropriate for me?

Consider your estimated retirement date and risk tolerance. These funds' investment programs assume a retirement age of 65. It is expected that the investor will choose a fund whose stated retirement date is closest to the date the investor turns 65. Choosing a fund targeting an earlier date represents a more conservative choice; targeting a fund with a later date represents a more aggressive choice. It is important to note that the retirement year of the fund you select should not necessarily represent the specific year you intend to start drawing retirement assets. It should be a guide only.

What will happen on the target date?

The funds assume a retirement age of 65. After a fund reaches the stated retirement year indicated in its name, the fund will continue to "roll down" to a more conservative allocation designed to place greater emphasis on income and reduce investors' overall risks. About 30 years after its stated retirement year, the fund will maintain a fixed neutral allocation to stocks.

The Retirement Balanced Fund is not managed to a specific retirement date and does not become more conservative over time. Instead, the fund normally maintains approximately 60% of its assets in bonds and 40% of its assets in stocks, which represents a broad allocation designed for investors during their retirement years.

Some Final Thoughts

- Funds work best when held over long periods of time
- Compare performance against peers; chronic underperformers may be poorly managed
- Some active managers do outperform but it's very hard to predict which will in advance
- Costs matter
